

Growing Recipe

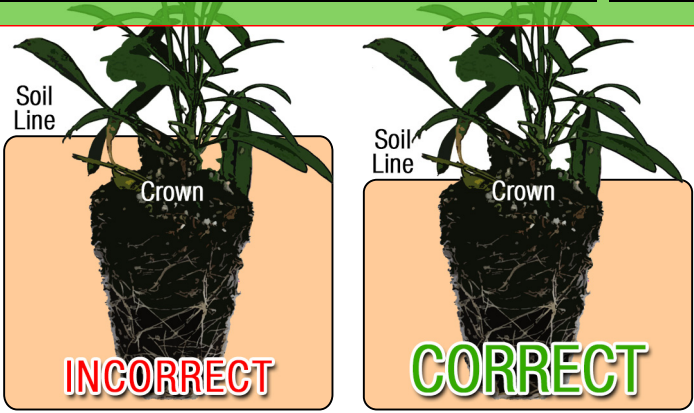

ECHINACEA 'PRAIRIE FROST'

Approximate Finish Time From Liner

☐ = Minimum ☐ = Maximum

| | | |
|------------------------------------|--|---------|
| pH: 5.8 - 7.3 | Fertilization Recommendations: 75 - 100 PPM | EC: 0.7 |
| Light Levels: Full sun | Water Requirements: Dry moderately between waterings | |
| Hardiness Zones: 4 - 10 | Possible Problems: <u>Insect</u> : Watch for aphids, mites, thrips, whitefly and slugs | |
| Habit: Clumping | <u>Diseases</u> : The plants can have leaf spot and crown rot if kept too moist | |
| Day Length for Flowering: Long day | | |

Do NOT bury the crown of the plug

Description

This plant has 3-4" blooms of rose-pink and narrow leaves with variegated edges. The world's first VARIEGATED coneflower! It has been stable with us for years.
